

“We recently had the BeerBlast installed into our draft beer system and the results have been extremely impressive. Since the unit has been installed we have eliminated our draft beer over foaming waste issues. Therefore, our draft beer costs have been reduced and profits have dramatically improved! The BeerBlast has been absolutely trouble free.

Of equal importance to us is the BlastOff - Leak Detection System which is incorporated into the BeerBlast. When the BlastOff system goes into alarm mode we are able to immediately locate the beer gas leak within our draft beer system, remedy the problem, reset the BeerBlast and we are back in business. We have eliminated the potential of numerous costly service calls by identifying the problem and fixing it quickly ourselves.

The BeerBlast has been a great addition to our draft beer system. I definitely recommend the BeerBlast to our other Dave & Buster's locations.”
